

# IdeaForge Tech IPO to close on June 30: issue subscribed 32x so far

New Delhi, June 28 (GNS) The strong investor demand for the issue of IdeaForge Technology has prompted market regulator Sebi (Securities Exchange Board of India) to extend the company's initial public offer till June 30.

The drone manufacturer had launched its IPO for three days, starting on June 26. However, giving in to the

request made by the company, Sebi has allowed the offer to run till Friday, June 30.

The Rs 567-crore IPO has witnessed massive investors' interest, especially in the retail investors and employee categories. Till 2:20 PM, the offer was subscribed 32 times, with retail portion subscription at nearly 58 times, employee portion at 54 times, NII at 50 times, and QIB at 15 times. Today is the third day of the offer.

IdeaForge's IPO is available in the range of Rs 638-672 apiece, with Rs 32 discount for employees. The management intends to utilise the net proceeds to repay debt, fund working capital requirements, invest in product development, and other general corporate purposes.

According to IPO Watch, the shares are commanding grey market premium (GMP) of Rs 550. At the upper end of the price band, this signals a likely listing price of Rs 1,222 and a listing gain of 82 per cent. The shares may debut on the NSE and BSE on July 10.

According to analysts at Motilal Oswal Financial Services, the issue is fairly valued at 5x P/BV as against peer average of 8x on a post-issue basis. The company, they said, could benefit from the government's impetus to the defence sector and rising enterprise demand. Moreover, their wide or complex product portfolio, presence in niche space, strong client relationship, and high entry barriers may make the public issue attractive.

The core solutions provided by Cyient DLM encompass various key components, including printed circuit board assembly, cable harnesses, and box builds. These components play a crucial role in safety of critical systems such as cockpits, inflight systems, landing systems, and medical diagnostic equipment. It has a customer base which includes global OEMs in the aerospace and defence, medical technology, and industrial sectors and its key customers include Honeywell International, Thales Group Services, ABB Inc., Bharat Electronics, and Mobio Diagnostics.

"Cyient DLM has strong industry tailwinds working in its favour as domestic EMS (electronics manufacturing services) industry is expected to grow at 32 per cent CAGR over FY22-27. Over FY21-23 period, Cyient DLM's revenue growth is lagging peers at 15 per cent CAGR; however, its strong order book provides decent visibility of accelerated growth going forward. Its valuation on P/E basis is reasonable compared to peers, at 66.2x FY23 earnings, considering the future growth opportunities. We recommend subscribing to the issue from long term perspective," said analysts a IPO note by Nirmal Bang.

On April 6, the first unit of the power plant, with 800MW capacity, had achieved its COD.

Power supply from the Godda plant to Bangladesh will further enhance energy security in the neighbouring country, it said.

"APJL shall supply 1,496 MW net capacity power from 2x800 MW Godda USCPTP under the PPA with BPDB executed in November 2017 for a period of 25 years via 400 kV dedicated transmission system connected to Bangladesh grid," the statement said.

It said power supplied from Godda power plant will have a positive impact on Bangladesh's power situation by replacing costly power generated from liquid fuel.

This transition shall help

the productivity of an additional 15 million "effective developers" working with artificial intelligence (AI) is likely to boost global gross domestic product (GDP) by more than \$1.5 trillion by 2030, said a study on Wednesday.

GitHub, the programming collaboration platform, said its AI-powered coding assistant is used by more than one million developers and adopted by over 20,000 organizations. GitHub Copilot has generated over three billion accepted lines of code to make it the world's most widely adopted AI developer tool, the company said.

Its report said that users accept nearly 30 per cent of code Copilot suggestions within the first year of use and find productivity improving later. The study is based on the analysis of 934,533 Copilot users.

There will be 45 million professional developers by 2030 and generative AI developer tools could bring in
